

CAUTION

Do not perform these procedures until you have watched the Case Cleaning Guidelines video or until you have been properly trained by store personnel to clean the cases. Make sure you follow safety procedures outlined by your organization and abide by any state and local codes that may apply.

Pre-Cleaning Check List

- Identify the cases that need to be cleaned (Note: Multiple cases usually run on the same refrigeration circuit, so plan on cleaning all cases on that circuit at one time)
- Post safety signs in the area of the cases that are going to be cleaned
- Remove the product from the cases and relocate to refrigerated storage area
- Turn off the refrigeration to the cases
- Turn off the electrical circuits to the cases
- Remove the deck pans and wire racks
- Visually inspect the cases for debris and ice
- Check the drain to make sure that it is not clogged
- Gather all necessary cleaning materials

Coolgenix Cases

1. Clean the top sill

- Spray the top sill with a mild cleaning solution and wipe it down with a clean cloth or paper towel
- Spray the top sill with sanitizer and allow it to air dry

2. Clean the rear doors and tracks

- Remove the rear doors from the tracks
- Use a mild glass cleaner and a clean paper towel or cloth and wipe down the doors
- Spray the doors with sanitizer and allow them to air dry
- Spray the door tracks with a mild cleaning solution and wipe them down with a clean cloth or paper towel
- A bottle brush may be used for cleaning the grooves in the door track
- When cleaning the rear door tracks, be sure to clean from the outside channel to the inside channel since there is a “wipe-out” groove machined into the track
- Replace the rear doors into the tracks

3. Clean the Coolgenix display pans and interior components

- Make sure that the surface of the pan is room temperature before you start cleaning
- Disconnect the coolant hoses from the pans using the quick connects on the hoses. Don't worry – it is normal for a few drops of the secondary fluid to escape when disconnecting the pans. It is food-grade solution that will not harm you or the case.
- Spray the display pans with a mild cleaning solution and wipe them down with a clean cloth or paper towel
- Do not put display pans in the dishwasher. Elevated temperatures can cause them to distort and leak with the increase in internal temperature.
- Spray the display pans with sanitizer and allow them to air dry
- For cases that have removable rear baffles, remove the rear baffle and spray them with a mild cleaning solution
- Spray the rear baffles with sanitizer and allow them to air dry
- Reinstall the rear baffles

4. Clean the tank

- Thoroughly spray tank with soap and hot water or a cleaning solution and let stand for 5 minutes
- Do not spray cleaning solution or water directly on electrical connections
- Scrub any heavily soiled areas with a non-abrasive cleaning pad
- Rinse the case interior using warm to hot water
- Apply sanitizer solution to the tank
- Dry interior glass with clean, dry paper towels
- Allow the remainder of case to air dry

5. Clean the front glass

- For standard glass, use a mild glass cleaner and a clean paper towel or cloth and wipe down the doors
- For non-glare glass, refer to special cleaning instructions contained on the CD or in the case installation manual

6. Clean prep areas

- Remove cutting board and pans
- Spray the cutting board with a mild cleaning solution and wipe it down with a clean cloth or paper towel
- Spray the cutting board with sanitizer and allow it to air dry
- Place condiment pans in 3-compartment sink and clean them there
- Spray the rear sill with a mild cleaning solution and wipe it down with a clean cloth or paper towel
- Spray the rear sill with sanitizer and allow it to air dry
- Replace the cutting board and condiment pans

7. Clean the exterior

- Spray the exterior panels with a mild cleaning solution and wipe them down with a clean cloth or paper towel
- Spray the exterior panels with sanitizer and allow them to air dry

Post Cleaning Check List

- Make sure that the drain is free of debris that could have accumulated during cleaning
- Clean up any spills on the floor
- Make sure that all components have completely air dried
- Turn on the electrical circuit and verify operation of electrical components
- Turn on the refrigeration to the cases
- Re-install the deck pans and wire racks
- Once proper temperature is established in the cases, restock them according to the store plan-o-gram
